AUTHOR: Shabov, I., Chief of School Section of Gor'kiy Labor Reserves Administration. 27-6-10/29

TITLE: Renovation of Machine Tools (Obnovleniye Stankov)

PERIODICAL: Professional'no - Tekhnicheskoye Obrazovaniye, 1957, Nr. 6(145) pp 13 - 14 (USSR)

ABSTRACT: The author stresses the extent of expediency in the teaching process, especially in practical training and in developing manufacturing technology. The students of the Gor'kiy District School manufacture all kinds of complicated articles, such as parts for lathes and drilling machines, tools and implements. The administration tries to introduce the advanced experiences of the best schools in the district. As an example the author states that Trade School Nr. 6 has designed more than 70 devices and 20 types of special instruments improving considerably the manufacture of the screw cutting lathe "1615M". For instance, the scraping of slides was replaced by grinding. The grinding wheel (with a 2,2 kilowatt electric motor at 2000 rpm) is mounted on the carriage of a planing machine. To increase accuracy, the rotor shaft is strengthened by two additional radial-thrust bearings. The wheel, when turned with the carriage, will grind flat and prismatic slides. A gear-chamfering machine made from

Renovation of Machine Tools.

parts of an obsolete screw cutting lathe is also quoted (drawing Nr. 1). The machining of the teeth-ends is done by a circulating instrument that is conveyed to every cavity of the gear by a cam. The division, corresponding to the number of machined teeth, is done by change gear. Drawing Nr. 2 shows a fixture for installing the lead screw, the feed shaft and a bracket on lathe '1615M'. The article contains two drawings and 4 photos.

TITLE: High-Stability Discriminator Circuit (Kontur diskriminatora s vysokoy stabil'nost'yu)

PERIODICAL: Radio, 1958, Nr 3, pp 35 - 36 (USSR)

ABSTRACT: Discriminator circuits used in FM transmitters and receivers must have a high stability. The authors present the results of an experimental investigation of the tuning stability of differently-designed discriminator circuits. The tuning stability of the discriminator circuits was investigated when connecting them to one and the same circuit (fig.1) and with equal steepness of the discriminator characteristic (1/4.5 v/kc) at a frequency of 6.5 megacycles. Figure 2 shows a graph of the stability of four different coil designs. Curve 4 belongs to the coil with the highest stability. It is shown in figure 4 and has a layer winding with two wires under a thread pitch of 0.35 mm, applied to a polystyrene cartridge. There are 2 diagrams, 1 circuit diagram, 1 sketch, 1 graph and 1 table.

TITLE: At the Old Plant (Na starom zavode)

PERIODICAL: Professional'no - Tekhnicheskoye Obrazovaniye, 1957, # 10, p 26 (USSR)

ABSTRACT: The artitle describes the favorable influence the veterans of revolution or the pensioned workmen have on the students of Trade School # 5 at Sormovo, in particular, on those students who play truant or misbehave themselves. It states that the Sormovo Plant, which is the school's basic enterprise, is one of the oldest. There are 400 boys and girls receiving their education at the school.
There is one figure.

TITLE: Technical Data on a Rapid Glow Starter for Luminescent Tubes (Tekhnicheskiye dannyye pribora bystrogo zazhiganiya lyuminestsentnykh lamp).

PERIODICAL: Energetik, 1958, Nr 7, p 39 (USSR)

ABSTRACT: V.A.Yelin from Kuybyshev requests technical data on the elements composing the circuit of the rapid glow starter for luminescent tubes of the "DS-30" type utilized with a 127 v network. The author gives the diagrams, the instructions for current regulating, as well as the structural data of chokes grouped in a table. Figure 1 shows the circuit diagram containing the luminescent tube of 30 w at 127 v. There are 3 diagrams and 1 table.

TITLE : Study of the Resistance of Peach Varieties to Leaf Curl Injury

ORIG. PUB. : Byul. nauchn. inform. Gos. Nikitsk. botan. sad, 1957, No 5-6, 25-26

ABSTRACT : Observations during 1951-1956 of 378 peach varieties have shown that no variety is completely immune. Most resistant are: Amsden, Molozavi, Onlyut and Dushumskiy Ornzhevyy Family. Moderately resistant -- Zolotoy Yubiley, Pushistyy Ranniy, Rochester, Kuban'ets, Sochnyy, Nikitskiy, Russkiy, Minlon Bol'shoy Ranniy, and Yubileynyy. Strongly attacked are -- Arp, Greensboro, Sovetskiy, V.Chkalov, Krasnyy, Rot-front, Liberta, Zafran, Zolotoy Oser', and Kumach.

and Derry Station where 75 new peach strains were developed, are described in detail. At the Nikita Botanical Garden the aim of peach selection was to attain high-quality, frost-resistant, high-yield strains with various ripening dates for different uses in the steppe zone of the Crimea. The Northern Chinese, Iranian, and, in part, Fergana groups are the most significant for the Crimea and for regions with similar climatic conditions. Biological and pomological descriptions are given in full of 45 new peach strains. New canning varieties of the ordinary type as well as early-ripening canning strains, permit to extend the canning season by 5-6 weeks. In terms of table varie-

Title : Achievements in the Selection of Stone Fruit Culture at The Nikitsk Botanical Garden.

Orig Pub : Agrobiologiya, 1957, No 5, 41-54.

Abstract : During the first stage of its post-revolutionary activities in 1925-1935 the Nikitsk Botanical Garden widely employed the method of introducing varieties from the southern zone of the Soviet Union and from foreign countries. As the result hundreds of specimens of varieties and types were selected. The following were selected, among others: peach varieties with sweet seed, varieties of apricots with a very early and very late ripening periods, a large group of apricots without down, sweet cherries with soft stones and semi-sweet seeds, and a series

Title : Selection of Winter Hardy Sweet Cherry Varieties in the Department of Steppe Horticulture of Nikitsk Botanical Garden.

Orig Pub : Byul. nauchn. inform. Gos. Nikitsk. botan. sad. 1957, No 5-6, 14-17.

Abstract : The sweet cherry in the steppe zone of the Crimea is more frost resistant than the peach and apricot although it also becomes frostbitten in severe winters. In the steppe department of Nikitsk Botanical Garden, the winter resistance of 200 varieties and 900 hybrid seedlings of the sweet cherry was studied. Among the standard varieties

1830. CHANGES IN THE MORPHOLOGY OF THE HYPOPHYSIS WITH AGE AND FUNCTION (Russian text) - Ryabov K. P. - DOKLADY I SOOBSHCH. UZHGOR. GOS. UNIV. 1957, 1 (50-52)

500 preparations of hypophyses were studied, from 35 rabbits aged 2, 3 and 5 months. It was established that in rabbits, under the conditions of physical stress, structural changes spread in all 3 lobes of the hypophysis but are most distinct in the anterior lobe. The number of cell forms in the anterior lobe of the hypophysis varies in animals of the same age, as well as of different ages, depending on conditions of life. In rabbits, as a rule, chromophobe and basophilic cells predominate.

AUTHOR: Ryabov, K. P.

TITLE: The DNA content in the adrenal gland of rabbits of different ages during physical strain

SOURCE: AN BSSR. Doklady, v. 9, no. 7, 1965, 483-487

TOPIC TAGS: physiological stress, DNA, rabbit, adrenal gland, physical strain, cytophotometry, adrenal cortex

ABSTRACT: Rabbits were subjected to physical strain in order to determine the DNA content in their adrenal glands under these conditions. Three groups of animals—young (1.5 mo), mature (3 mo), and adult (6 mo) —were tested for periods of 2, 4, and 6 weeks. Physical strain consisted of one daily run in a treadmill. The rabbits were kept in small cages to limit their movements and were fed normally. The animals were killed by air embolism in the established periods. Sections of adrenal glands from experimental and control animals of the same age and period of the experiment were prepared for histochemical study. Cytophotometry was used to determine the amount of DNA in sections of each zone of the adrenals. Results showed that under the influence of physical strain, changes occurring in the DNA content of the

adrenal cortex vary with the age of the animal (see Fig. 1 of the Enclosure). Similar data were given for mature and adult rabbits. It was concluded that physical strain produces changes in the DNA content of cells of the stroma and parenchyma of the adrenal cortex. Increase in the DNA content is observed in parenchymatous cells of the glomerular and fascicular zones, and to a lesser degree in the reticular zone of the adrenal cortex. Thus, it is assumed that physical strain stimulates the process of internal secretion, which is presumed to take place in these zones of the adrenal cortex and especially in cells of the parenchyma. It was concluded that physical strain intensifies the incretory activity of the interrenal system of young rabbits and sexually mature rabbits, and temporarily stimulates this activity in adult rabbits. TITLE: Electrostatic generator. 25 Class 21, No. 181717

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 10, 1966, 50

TOPIC TAGS: electrostatic generator, electronic test equipment

ABSTRACT: A high dc voltage electrostatic generator with a cylindrical rotor is described. The rotor, from which the charge is collected by corona-type brushes,

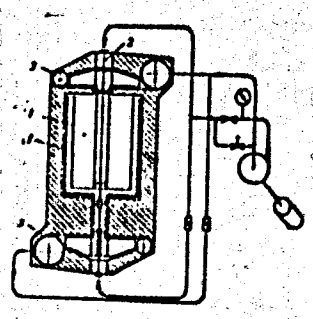

Fig. 1. Electrostatic generator

1 - Rotor; 2 - axis; 3 - gas motor.

Card 1/2 UDC: 621.319.332

is driven by forced air. The generator power output is increased by the design which allows the two concentric rotors mounted on the same shaft to rotate in opposite directions, and the two planes containing the charge collecting corona-type brushes for the two rotors to be displaced from one another. Compactness is achieved by utilizing gas motors for the rotor drive. Orig. art. has: 1 figure. [BD]
